4 Maintenance

WARNING!

Risk of injury! Disconnect the ventilator from the power source before maintenance.

- Check the power cable regularly for damage. If the power cord is damaged, it must be replaced by a qualified person.
- Regularly use compressed air or a vacuum to remove lint and other debris from the motor, screen and blower wheel. Do not use a pressure washer to clean the unit. If any electrical elements do get wet, they must be dried immediately.
- Clean the housing with a mild detergent and water.
- Check all external parts to ensure they have been installed properly. Be alert for unusual noises.

5 Troubleshooting

Problems	Possible causes	Solutions
Motor does not run	No power supply to the device	Connect device, check fuse
	Switch/knob not turned on	Turn knob on
	The switch is faulty	Replace switch
	Faulty/broken cord or motor wire	Perform continuity check, using volt/amp meter. Repair/replace faulty or broken wire
Motor runs but air mover makes loud scraping noise	Unit has been severely jolted causing blower wheel to rub against housing	Contact technical service or your dealer
	Unit has been severely jolted causing housing to deform	Contact technical service or your dealer
Device vibrates excessively	Severe jolt has bent motor shaft causing unit to be out of balance	Remove and replace motor
	Fan wheel is damaged	Replace wheel if necessary
	Fan wheel is dirty	Clean the wheel
Unit runs but blower wheel does not run	Motor bearing are failing or motor has developed an internal electrical fault	Replace motor
	Intake grill and/or exhaust grill is obstructed	Remove obstruction
	Excessive duct length	Reduce duct length to recommended maximum
